

DAY 6 - Deployment Preparation and Staging and Environment Setup

Name: Farah Shabir
Roll No:00006855
Time: 9:00 AM to 12:00 PM
Slot: Sunday

Deployment Details:

1. Deployment Link: <https://hackathon-3-done-ten.vercel.app/>
2. Repository Link: <https://github.com/Farahshabir/hackathon-3-done.git>

Deploying Your Next.js E-Commerce Site on Vercel

Step 1: Set Up Hosting on Vercel

1. Choose a Hosting Platform

We will use Vercel to deploy our Next.js application because of its seamless integration with Next.js, ease of use, and powerful performance optimizations.

2. Connect Your GitHub Repository

Follow these steps to deploy your project from GitHub:

1. Log in to your Vercel account. If you don't have an account, sign up at vercel.com.
2. Click on "Add New" → "Project".
3. Select "Import" and choose your GitHub repository.
 - If prompted, authorize Vercel to access your GitHub account.
 - Select the repository containing your Next.js project.
4. Follow the deployment steps, and Vercel will automatically configure your project.

Step 2: Configure Environment Variables

1. Add Environment Variables in Vercel

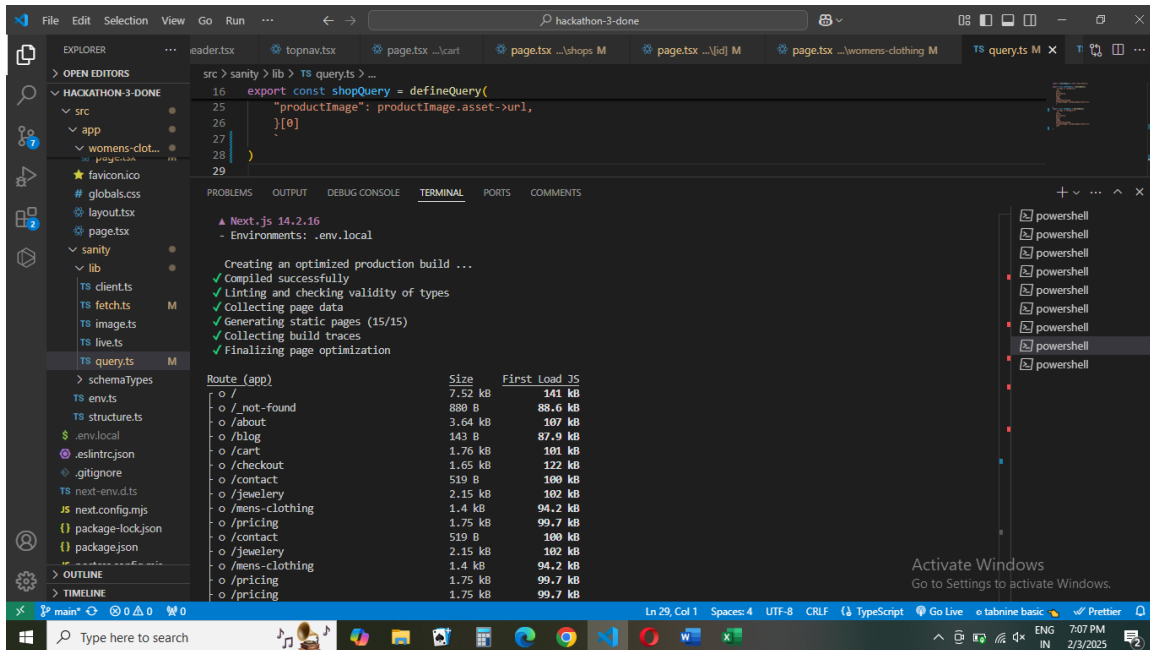

1. Navigate to your Vercel Project Dashboard.
2. Go to Settings → Environment Variables.
3. Click "Add" and enter the required environment variables.

Example Variables for Sanity Integration:

```
NEXT_PUBLIC_SANITY_PROJECT_ID=your_project_id  
NEXT_PUBLIC_SANITY_DATASET=production  
SANITY_API_TOKEN=your_sanity_api_token
```

4. Save the variables and redeploy your project to apply changes.

Testing stage deployment

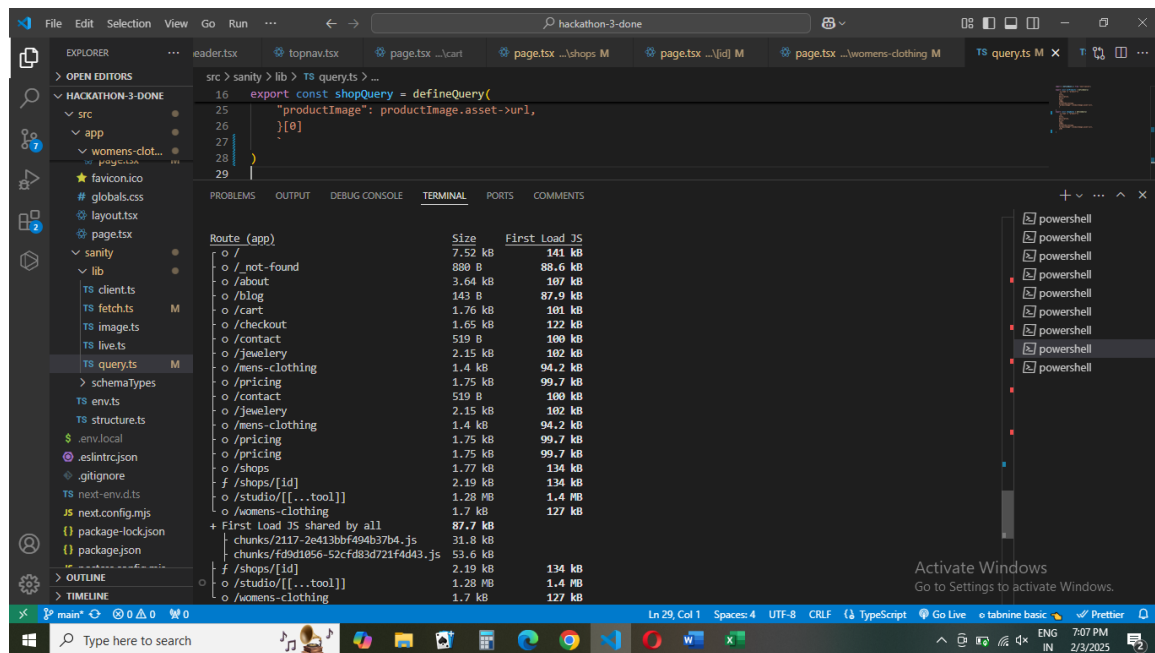

```
src > sanity > lib > TS queryts > ...
16 export const shopQuery = defineQuery(
25   "productImage": productImage.asset->url,
26   ][0]
27 )
28
29
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS COMMENTS

▲ Next.js 14.2.16
- Environments: .env.local

Creating an optimized production build ...
✓ Compiled successfully
✓ linting and checking validity of types
✓ Collecting page data
✓ Generating static pages (15/15)
✓ Collecting build traces
✓ Finalizing page optimization
